

Bongo Net:

Arudhra Technology specializes in producing high-quality bongo nets, essential tools for marine research, monitoring, and environmental assessments. Our bongo nets are designed to meet the rigorous demands of oceanographic studies, providing reliable performance in capturing plankton, fish larvae and other marine organisms.

Key Features of Arudhra Bongo Nets:

- **Durable Construction:** Made with robust materials to withstand harsh marine conditions
- **Precision Engineering:** Ensures consistent and efficient sampling
- **Customizable Options:** Available in various mesh sizes, frame designs, and attachment configurations
- **Water Quality Monitoring:** Assessing water quality and pollution levels
- **Microplastic Sampling:** Collecting microplastics and marine debris
- **Zooplankton Dynamics:** Understanding zooplankton role in the food chain
- **Fisheries Management:** Informing fisheries management decisions
- **Climatic Change Research:** Studying impacts on marine ecosystems
- **Marine Conservation:** Supporting conservation efforts and protected areas

LENGTH : 2 METERS

MATERIAL : SS 316
